STANDARD
sling

The Standard Sling is placed under the armpits due to its full padding under the arms which distributes traction on the patient and avoids painful pressure.

We recommend using it with the EASYLEV range (pages 24-27) - it can still be used with all stand-up lifts on the market equipped with a hook system.

WALKING AID
sling

The Walking Aid Sling is used as a walking aid in order to improve patient's mobility and independence.

We recommend using it with all devices which are equipped with a removable platform.
