PATIENT LIFTS

Presentation

All our patient lifts are compliant to European Standard NF EN ISO 10535:2007.

The best solution to perform daily care

Patient lifts are designed to transfer patients from a bed, chair, toilet, wheelchair or from the floor, in an easy and efficient way.

They allow patients in care environments to acquire physical and psychological benefits while preserving mobility, independence and dignity as they provide the most appropriate solution for lifting and positioning.

For safe and comfortable transfers

Transfer with a patient lift is qualified as a “passive transfer” because the patient doesn’t need to actively participate.

They have been conceived to lift the patient with minimum effort while decreasing stress on caregivers who can devote more attention to the security and the comfort of the patient.

What you need to know before choosing

Selecting the right device is essential for maintaining mobility as the use of adapted equipment reduces the risk of injury, both for the patient and for the caregiver.
