Founded by Pierre-Henri CHAUZAT and established in the South of France, NAUSICAA Medical is a French designer and manufacturer since 1993 of “Made in France” high quality products for geriatrics, disability, rehabilitation, re-education and palliative care with a focus on stand-up lifts, patient lifts and medical slings.

Our 3 complementary buildings (2 in Gallargues-le-Montueux and 1 in Aubais) allow us to have an important production and storage capacity in order to meet the increasing demand for our products in our local market in France and in our developing markets overseas.

Our experienced team works closely with professionals for more than 25 years to ensure that our product offering perfectly meets patient needs.

Our strategic vision is to make innovative devices every year with a continuous important investment in our R&D department:

- more precisely, we are extremely proud to introduce this year new innovative stand-up lifts with the WAYUP 5 (page 14) and EASYLEV 5 (page 20).

M **MADE IN FRANCE**

It is with a great pride that we produce our devices in France for more than 25 years.

“Made in France” manufacturing is the main motivation of NAUSICAA Medical’s philosophy through our commitment and our unique know-how which fully contributes to the quality of our products.

Our production is conducted according to the highest European standards of quality control using a zero-defect policy under the supervision of our highly qualified and experienced staff.

We are able to guarantee the origin and traceability of a product along with the trust, flexibility and transparency.

All these convictions are essentials to assure a close partnership.

INTERNATIONAL NETWORK

50
DISTRIBUTORS

39
COUNTRIES

Over the last years through its continuous development, our export service has been a tremendous asset of the company.

We only export the products that we design and/or manufacture ourselves, because our goal is to give our customers clear information on the origin and traceability.

As of now, we operate a network of more than 50 active distributors in more than 39 countries:

Argentina, Austria, Belgium, Chile, China, Costa Rica, Croatia, Denmark, Estonia, Finland, Germany, Hong-Kong, India, Iran, Ireland, Israel, Italy, Latvia, Lebanon, Lithuania, Luxembourg, Malaysia, Malta, Moldavia, Morocco, Netherlands, Pakistan, Philippines, Poland, Portugal, Qatar, Romania, Saudi Arabia, Spain, Switzerland, Thailand, United Arab Emirates, United Kingdom.

R&D DEPARTMENT

Product development is the key of our strategic vision with our own R&D department which uses sophisticated CAD and CAE softwares to design our devices.

Continuously, our team analyzes our devices with optimized testing facilities according to the most advanced quality standards in order to keep improving our most valuable assets: our products.

On a daily basis, we conduct activities to improve the quality of our manufacturing and to produce new devices each year as innovation is a major element of our growth and development.

R REGULATORY AFFAIRS

In order to help us implement procedures to ensure the safety and quality of our products, we apply European directives and are certified by world leading independent inspection organization.

Our 3 sites are certified ISO 13485 by a global leader in Testing, Inspection and Certification.

Based on ISO 9001, the emphasis on continual improvement is replaced with an emphasis on meeting regulatory and customer requirements, risk management, and maintaining effective processes, namely the safe design, manufacture, and distribution of medical devices.

All our Class 1 Medical Devices are CE marked, fulfilling the essential requirements of European Directive 93/42/EC on medical devices as amended by European Directive 2007/47/EC.

The new Medical Devices Regulation (2017/745/EU) (MDR) brings EU legislation into line with technical advances, changes in medical science, and progress in law making.

The new Regulations create a robust, transparent, and sustainable regulatory framework, recognised internationally, that improves clinical safety and creates fair market access for manufacturers.

The MDR will replace the existing Medical Devices Directive (93/42/EEC) (MDD) and was published in May 2017, marking the start of a three-year period of transition from the MDD.

The transitional period will end on 26 May 2020, the "Date of Application" (DoA) of the Regulation, from that date the MDR will apply fully.

E XHIBITIONS

NAUSICAA Medical is very proud to participate each year in the following exhibitions in order to meet our customers, showcase our new products and seek new partnership opportunities.

MEDICA

With 123 000 trade visitors from over 130 countries, MEDICA is the largest medical exhibition in the world, it attracted more than 5 100 exhibitors from 70 countries in 17 halls.

We would be glad to welcome you on our booth in Hall 14 from the 18th to the 21st of November 2019 in Dusseldorf, Germany.

ARAB HEALTH

This exhibition is the largest gathering of healthcare and trade professionals in the MENA region where 85 000 visitors and more than 4 000 exhibitors from 66 countries are present.

We invite you to meet our export team on our booth located on the French pavilion from the 27th to 30th of January 2020 in Dubai, United Arab Emirates.

The continuous improvements of our website are a strategical part of NAUSICAA Medical's worldwide communication vision.

In a context of global technology change, our website is optimized for all browsers and mobile phones.

NEED DOCUMENTATIONS?

Easy to navigate and fast, our internet platform is a clever solution to quickly find detailed information on all our products complemented by a quick download of all related files (marketing brochures, CE certificates, product sheets, user manuals, spare parts exploded views).

NEED DEMONSTRATION VIDEOS?

On each product page you will find updated videos made in partnership with ERGOTEAM (occupational therapy trainers) on the use of our products.

NEED A NUMERIC VERSION OF THE CATALOGUE?

If you need a pdf version, our new product catalogue is easily downloadable directly from the website.

NEED TO KNOW WHERE TO MEET US?

Go to the "NEWS" tab and find a clear agenda of all the exhibitions we take part of over the course of the year.

WELCOME TO NAUSICAA MEDICAL

Our Product Categories

NAUSICAA Médical

The screenshot shows the NAUSICAA Médical YouTube channel page. At the top, the channel name 'NAUSICAA Médical' is displayed with 251 subscribers and a red 'S'ABONNER' button. Below the header, there are tabs for 'ACCUEIL', 'VIDÉOS', 'PLAYLISTS', 'CHAÎNES', and 'À PROPOS'. The main video player shows a video titled 'WAYUP' with 302 views, featuring the NAUSICAA Médical logo and the text 'GAMME WAYUP'. To the right of the video player, there is a description of the WAYUP product and a 'LIRE LA SUITE' link. Below the video player, there is a section titled 'Présentation de NAUSICAA Médical' with a short video thumbnail and a description of the company. Further down, there is a section titled 'Releveurs-Mobiles (verticalisateurs)' with a 'TOUT REGARDER' link and a list of products: BLUE WAYUP, WAYUP, EASYLEV, and ACTIV'UP, each with a video thumbnail and duration.

NAUSICAA Medical offers Youtube demonstrations video to inform you about our products.

Our marketing team has updated this year our YouTube channel in partnership with ERGOTEAM FRANCE with short demonstrations videos (circa 2 minutes) on several ranges of our products, especially on our lifters and slings.

Generating close to 5 000 views each month and more than 220 000 views since its creation, our YouTube channel allows all viewers to have a quick access to our product videos.

Our partner, ERGOTEAM FRANCE was created in 2005 by Lionel MARKO (occupational therapist) to meet a specific need of highly qualified training in the fields of ergonomics for a better prevention of health at work.

STAND-UP LIFTS

Presentation

All our stand-up lifts are compliant to European Standard NF EN ISO 10535:2007.

Stand-up lifts make caregivers' work easier

Stand-up lifts are designed to enable patients to be raised up from a bed, a comfort chair, a toilet seat or a wheelchair for safe transfers.

They allow a single caregiver to lift a patient with minimum effort in order to devote more attention for encouraging the patient's active participation in the transfer routine.

The process is fast, safe, and efficient

Transfer with a stand-up lift is qualified as a "semi-active transfer" because the patient needs to participate during the movement and maintain some stimulus (in at least one of the two legs).

Encouraging patient mobility and promoting dignity, stand-up lifts are ideal for patients whose mobility is reduced and have difficulty getting up into a standing position.

Patients in home or in care environments gain significant physical and psychological benefits when their mobility is preserved.

What you need to know before choosing

Selecting the right device is essential for maintaining mobility as the use of adapted equipment reduces the risk of injury, both for the patient and for the caregiver.

WAYUP RANGE

THE MOST EFFICIENT AND COMPACT STAND-UP LIFT ON THE MARKET

The WAYUP range is our number one line in sales for several years thanks to its compact design and the efficiency of its specific movement in one quick motion.

Very compact, fast and easy to use, it is declined in 3 different models: fixed base or mechanical or electrical opening. It is also available in a bariatric version which includes the features of the WAYUP 4 (page 18).

Efficient while respecting the natural lifting scheme.

Due to its efficient and fast lifting patented movement, the WAYUP range allows the patient to reach a standing position while respecting the natural lifting scheme.

During the transfer, the patient's bust tonicity is actively stimulated while supporting the lack of tonicity in the lower body.

As an option, a lithium battery (page 25) is available to enhance the use of the device.

WAYUP 5

Fixed Base

DEMONSTRATION VIDEO

Conceived to adapt to all morphologies.

Because each patient is different, the new WAYUP 5 can be adapted for all morphologies and pathologies to keep a natural lifting scheme of movement.

Its innovative extendable lifting arm can be adjusted to six different length positions for the best possible patient care as it optimizes the sling's position.

A unique device on the market.

Extremely compact, the remarkable low base (6,5 cm) of the WAYUP 5 Fixed base can be positioned under the lowest electrical wheelchairs on the market to lift the patient in ideal conditions from a sitting to a standing position.

Designed with a toilet shape, it is specially optimized for confined spaces.

Stronger than the WAYUP 4, the maximum weight capacity has been increased to 180 kg.

NEW KEY FEATURES

An innovative **expandable lifting arm** in 2 parts which can be adjusted to 3 different lengths positions to adapt to each patient's morphology for the best possible care.

In addition, the **lifting arm is also reversible** to allow 2 different heights configurations to optimize the sling position:

- on the lumbar region to operate a semi-active transfer
- under the armpits to operate a semi-passive transfer

A made in our textile workshop **ergonomic knee block** manufactured with fabric and foam to protect vulnerable knees.

Equipped with a **calf-strap** as standard to secure the legs.

A comfortable lined with **foam removable heel pad** to easily position the patient feet before a transfer.

Lowered castors to achieve a 6,5 cm height to gain access to electrical wheelchairs with very low bases.

RECOMMENDED SLING

The Specific Sling (page 32)

Positioned on the lumbar region in order to trigger the patient's natural raising scheme, its rigid foam padding at the back-part level reduces painful pressure and its belt allows transfers in a sitting position.

STAND-UP LIFTS

WAYUP XL

With Electrical Opening Legs

The WAYUP is also available in an XL version as a specialized model for bariatric patients up to 300 kg.

Derived from the WAYUP, this product is designed to improve the daily lives of patients whose size and weight are challenging with its lifting power (10 000 N) in conjunction with its manufacturing specificity.

Secure and extremely sturdy, this range allows the patient to reach a standing position to deliver safe, comfortable and dignified care for bariatric patient.

In addition, the removable platform enables to convert the device into a walking aid in order to fight against the bedridden process of bariatric patients with reduced mobility.

EASYLEV RANGE

A HIGH-END LINE FOR THE BEST QUALITY CARE

Characterized by its ingenious patented double movement, the EASYLEV range is a high-end line as it allows caregivers provide high quality care with the best comfort in all environments.

Declined in 3 different models (fixed base or mechanical or electrical opening), it is also available in a bariatric version which includes the features of the EASYLEV 2 (page 24).

Extremely comfortable with its smoothly motion.

Due to its combined movement of the telescopic mast and of the traction sling, the EASYLEV range is providing a high level of comfort to the patient by supporting a very low tonicity of the patient's chest area during all the standing-up process.

As an option, a lithium battery (page 25) is available to enhance the use of the device.

BLUE WAYUP RANGE

AN ECONOMICAL RANGE FOR ALL BUDGETS

The BLUE WAYUP range is a made in France entry-level line which has been specially designed for the budget conscious without compromising on quality and attention to detail.

Declined in 3 different versions (fixed base or mechanical or electrical opening), the devices are equipped with all the features of a premium stand-up lift in order to safely transfer a patient from a bed, a comfort chair, a toilet seat or a wheelchair.

A patented movement to stimulate the patient.

The BLUE WAYUP range allows the patient to reach a standing position with one fast and efficient lifting movement during a transfer in a similar way than the WAYUP.

The devices contribute to the stimulation of the patient by activating the chest area and supporting the lack of muscle tone in the lower body along with a 150 kg weight capacity providing a safe transfer solutions for homecare.

As an option, a lithium battery (page 25) is available to enhance the use of the device.

STAND-UP LIFTS SLINGS

Presentation

SCAN ME
to view all
devices

An historical know-how

Widely recognized as a textile expert, NAUSICAA Medical has been manufacturing slings for more than 25 years and works closely with health professionals to warrant that our slings perfectly match all patient needs.

Easy for the caregiver and safe for the patient

Quick and easy to install for the caregiver, our stand-up lifts slings are compliant to European Standard NF EN ISO 10535:2007 and ensure comfort as well as security for the patient.

One sling for each device

For each of our lifters, we offer an appropriate sling, compatible with all stand-up lifts on the market equipped with a hook system, to ensure that patient's mobility is assisted in the most appropriate manner possible for the safest transfer.

CE Certification

All our slings are CE certified in compliance with EU requirements.

Fabric

The slings are manufactured in polyester fabric.

Washing

All our slings are washable at 70°C.

Reach Compliance

Our slings follow the REACH regulation which aims to progressively remove the most dangerous chemical substances in the European Union.

Certified

WAIST (in cm)	/	70/90	90/115	115/140	140/165

STAND-UP LIFTS SLINGS RANGE

User Guide

A wrong sized sling generates discomfort and increases the risk of injury for the patient.

Choosing the correct sling size is essential in order to ensure safety during the transfer.

A size colour-code of the edges has been put in place in order to quickly identify the size of each sling:

- to the size S corresponds the Yellow colour
- to the size M corresponds the Red colour
- to the size L corresponds the Green colour
- to the size XL corresponds the Blue colour
- to the size TU (one size fits) corresponds the Black colour

In order to select the size of a sling, the caregiver must match the chest (eco and standard slings) or waist (specific and walking aid slings) with the dimensions mentioned in the table beside.

Compatibility Chart

	WAYUP 5 (page 14)	WAYUP 5 with opening legs (pages 16-17)	WAYUP XL (page 18)	EASYLEV 5 (page 20)	EASYLEV 5 with opening legs (pages 22-23)	EASYLEV XL (page 24)	BLUE WAYUP (page 27)	BLUE WAYUP with opening legs (pages 28-29)
ECO SLING (page 32)	★	★	★	★	★	★	★★★★	★★★★

STANDARD SLING (page 33)	★★	★★	★★	★★★★	★★★★	★★★★	★★	★★
WALKING AID SLING (page 33)	/	★★★★	★★★★	/	★★★★	★★★★	/	★★★★

IMPORTANT

An assessment of the patient's capacity is required before using a stand-up lift; should be considered, depending on the situation, the patient's physical handicap, pathology and morphology.

ECO SLING

Jersey

SPECIFIC SLING

Jersey

Option:
padded buttocks belt

The Eco Sling is a one size fits which is specially designed to be used with the BLUE WAYUP range (pages 26-29).

Placed under the armpits or on the lumbar region, its padding under the arms distributes traction on the patient and avoids painful pressure during a transfer.

The Specific Sling is manufactured to be used with the WAYUP range (pages 13-18).

Positioned on the lumbar region in order to trigger the patient's natural raising scheme, its rigid foam padding at the back-part level reduces painful pressure and its belt allows transfers in a sitting position.

We also propose as an option a more comfortable and padded buttocks belt.

PATIENT LIFTS

Presentation

All our patient lifts are compliant to European Standard NF EN ISO 10535:2007.

The best solution to perform daily care

Patient lifts are designed to transfer patients from a bed, chair, toilet, wheelchair or from the floor, in an easy and efficient way.

They allow patients in care environments to acquire physical and psychological benefits while preserving mobility, independence and dignity as they provide the most appropriate solution for lifting and positioning.

For safe and comfortable transfers

Transfer with a patient lift is qualified as a “passive transfer” because the patient doesn’t need to actively participate.

They have been conceived to lift the patient with minimum effort while decreasing stress on caregivers who can devote more attention to the security and the comfort of the patient.

What you need to know before choosing

Selecting the right device is essential for maintaining mobility as the use of adapted equipment reduces the risk of injury, both for the patient and for the caregiver.

FLYER RANGE

PRACTICAL AND POLYVALENT TO PERFORM HIGH QUALITY CARE

The FLYER range is our bestselling hoist line as it is made of high-end products for caregivers in order to provide quality care during transfers.

Declined in 4 different models (compact sized with mechanical opening, standard sized with mechanical or electrical opening, bariatric version with electrical opening), the devices are suited for priority situations where fast and effective lifting is required.

They are designed to have the highest level of quality and safety to ensure that the caregiver and the patient are protected against any risk of injury.

As options, a lithium battery (page 51) is available to enhance the use of the device and a mountable NAUSICAA weighing system (page 50) to determine the patient's weight.

NAUSI-FLY RANGE

COST EFFECTIVE AND OPTIMIZED TO PERFORM SECURE AND COMFORTABLE TRANSFERS

The NAUSI-FLY range has been conceived as an optimized mix between an economic budget and high-end specifications.

Declined in 3 different models (standard and compact sized with mechanical opening or standard sized with electrical opening), it offers a great maneuverability, a simplicity of use and a versatility allowing to perform secure and comfortable transfers for all patients.

Its smooth lifting movement allows a single individual to manage a wide range of patient handling routines in a secure environment while the caregiver can maintain the correct posture to avoid injury.

As options, a lithium battery (page 51) is available to enhance the use of the device and a mountable NAUSICAA weighing system (page 50) to determine the patient's weight.

NAUSICAA WEIGHING SYSTEM

Weigh easily patients during transfers

All our patient lifts can be equipped with a weighing system which is designed to easily determine the weight of patients (up to 300 kg) during transfers by a patient lift.

Good to know

The device's maximum capacity on which it will be assembled prevails on the weighing system (delivered with fixations to reduce the loss of useful height).

It can only be mounted on a NAUSICAA Medical patient lift and is supplied with fixings.

Caution

In order to maintain a correct useful height, we do not recommend using it with compact devices such as the BLUE FLYER COMPACT, the NAUSI-FLY COMPACT and the FLYER COMPACT.

DISADVANTAGES	<ul style="list-style-type: none"> - Large patients - Patient comfort - Lifting from floor 	/

SPREADER BARS

Our patient lifts are equipped with two different spreader bars shapes depending on the devices.

Both models provide different advantages of use which are listed beside.

	LEAD BATTERY	LITHIUM BATTERY
Autonomy on a 35 cm lifting stroke actuator (FLYER - BLUE FLYER)	40 cycles	84 cycles
Time to recharge up to 85%	2h30	1h10
Lifespan (number of complete charges)	Up to 300	Minimum of 2000
Lifespan (number of micro charges)	Up to 240	Up to more than 8000
Weight of the battery pack	4 kg	1,8 kg
Warranty	None	2 years
Average lifetime	6 months to 2 years	2 years to 8 years

LITHIUM BATTERY OPTION

Lithium batteries support very well partial charging which reflects more the reality of use as you can recharge them as soon as the device is no longer used, even for a few minutes.

More efficient at all levels, and also lighter in handling, lithium batteries are perfectly suited for intensive use conditions.

PATIENT LIFTS SLINGS

Presentation

Due to its high-quality standards in order to deliver the best product, NAUSICAA Medical is the number 1 French manufacturer of hoists slings since 1993.

We provide a complete range of patient lifts slings for all patients and conform to European Standard NF EN ISO 10535:2007.

Selecting the correct sling is paramount

Each patient is unique, and it is essential to select a sling that best suits the patient for comfort, safety and practicality.

Compatibility with all devices on the market

For each of our patient lifts, we offer a suitable sling, compatible with all patient lifts on the market with a 2-point or 4-point spreader bar, to ensure that patient's mobility and rehabilitation are assisted in the most appropriate manner possible.

CE Certification

All our slings are CE certified in compliance with EU requirements arising to the product's manufacturer.

Fabric

Our slings are manufactured in polyester either in jersey, a very easy to handle fabric which provides an optimized and comfortable positioning, or in net which is ideal for bath and toilet, as it avoids maceration and is easy to dry.

Washing

All our slings are washable at 70°C.

Reach Compliance

Our slings follow the REACH regulation which aims to progressively remove the most dangerous chemical substances in the European Union.

Certified

Quality

PATIENT LIFTS SLINGS RANGE

User Guide

Sizing is an important element when deciding on a sling.

In addition to comfort, choosing the appropriately sized sling will improve the patient's safety during transfer.

That's why, a size colour-code of the edges has been put in place in order to quickly identify the size of each sling:

- to the size S corresponds the Yellow colour
- to the size M corresponds the Red colour
- to the size L corresponds the Green colour
- to the size XL corresponds the Blue colour
- to the size 2 XL, 3XL, 4XL corresponds Orange colour
- to the size TU (one size fits) corresponds the Black colour

In order to choose the right sling, the caregiver shall consider the 3 following factors with the patient:

- height
- waist size
- thighs size

HEADRESTS

The addition of a headrest helps to take in charge the patient's head and protects the cervical.

Straps Positioning

Low straps crossed between legs

Low straps crossed under legs

Low straps uncrossed between legs

UNIVERSAL ECO TOILET SLING

The Universal Eco Sling's U-shape avoids the placement of the sling under the patient's buttocks, its leggings comfort foam reduces the shearing effect and the positioning of hooks at the shoulders level avoids the phenomenon of compression during a transfer.

The bath model is preferred for the bath or shower as it is made in net fabric in order to evacuate the water and quickly dry.

We recommend using it for bed to chair to bed transfers.

REFERENCES

Comfort - Jersey	SURPC-PF-TU
Bath-Net	SURP-PF-TU
Removable Headrest	+TAMOV-PF

The Universal Eco Toilet Sling's extended U-shape completely frees the patient's buttocks to facilitate the positioning during the toilet and improve the installation and removal of the sling.

We recommend using it for toilet and daily change transfers and we do not advise it for patients with very low tone.

FAST ADJUSTABLE ECO SLING

(without headrest)

Jersey

Net

UNIVERSAL ECO HAMMOCK SLING

The Fast Adjustable Eco Sling's foam leggings reduce the pressures exercised on the thighs and the hooks with 2 settings (specifically designed for 2-point spreader bars) allow fast combinations for sitting, semi-sitting and lying transfers.

We recommend using it for bed to chair to bed transfers requiring a management of the head.

The Universal Eco Hammock's Sling indented cut on the sides makes it the preferred sling to let under the patient as it has no thickness which causes decubitus ulcers and it is preferred for the bath or shower due to its manufacturing in net fabric.

We recommend using it for "lifting from the floor" transfers in a lying position with the setup done at 180° by practicing a lateralization.

MANUAL HANDLING

Presentation

It's a question of making a transfer without a motorized system, it must be a safe and comfortable help for the patient and the caregiver as the patient just needs to be accompanied.

Manual transfer must be privileged rather than motorized transfer whenever the patient's condition allows it in order to encourage patient mobility and promote independence and dignity.

It helps to fight against bedridden process and makes simple gestures of everyday life a great way to rehabilitate and socially exchange between the patient and the caregiver.

Certified

Quality

LIFTING BELT

WALKING AID & LIFTING BELT

The Lifting Belt is used to raise a sitting person and preserves the caregiver of awkward postures during manual transfers.

Its inside fabric is in anti-slipping PU coating.

REFERENCES	Size M	CREL-PF-M
	Size L	CREL-PF-L

The Walking Aid & Lifting Belt is designed to prevent poor handling during manual transfers and is used on the patient as a walking aid for a safe handling.

As a lifting device, it is used around the patient's waist to provide a gripping point to the caregiver.

It is equipped with a self-centering 50 mm buckle to adjust the belt around the patient's waist.

MEDICAL BEDS

Presentation

SCAN ME
to view all
devices

All our medical beds are compliant to European Standard EN ISO 60601-1 and EN ISO 60601-2-52 for performance and safety which both focus on many aspects including electrical safety, load bearing, stability and durability – most notably on reducing risk of patient entrapment in and around the bed frame.

New models available

NAUSICAA Medical is proud to provide this year a complete range of 3 medical beds (standard, folding and bariatric) for all patients with many features and customizations possible:

1. the CONVERTISS Standard Plus, whose maximum weight capacity is 135 kg, is equipped with 4 actuators allowing 5 different functions: variable height, raising backrest section, adjustable leg rest section, chair position and Trendelenburg position.
2. the CONVERTISS Folding Premium offers the same functions with the addition of a folding/unfolding system for easy transport and installation along with an enhanced weight capacity of 180 kg.
3. the CONVERTISS Bariatric XL provides 3 functions (variable height, raising backrest section, adjustable leg rest section) with a weight capacity of 200 kg as standard to handle bariatric patients.

Quality and high level of functionality

Our uncompromising approach to the engineering of a product, from concept to manufacture, has allowed us to produce a range designed for the patient and caregiver in order to manage risk effectively while providing comfort and safety.

CONVERTISS

Standard Plus

The CONVERTISS Standard Plus, whose maximum weight capacity is 135 kg, is equipped with 4 actuators allowing 5 different functions: variable height, raising backrest section, adjustable leg rest section, chair position and Trendelenburg position.

Easy to use, its space saving storage facility is the main interest to Nursing, Care Home and Community environments.

The Trendelenburg position (and reverse Trendelenburg) is made to optimize venous return to the heart and prevents pooling of blood in the lower extremities.

As an option, an enlargement kit (up to 120 cm), a full-length side rails and a bed lever are available to enhance the use of the bed (see page 73).

CONVERTISS

Bariatric XL

The CONVERTISS Bariatric XL provides 3 functions with a weight capacity of 200 kg as standard to handle bariatric patients.

It is equipped with a translation raising backrest which aims to raise the bariatric patient in a secure way in order the best position while avoiding abdominal shear, and with a leg rest section with knee bending providing an optimized sitting comfort, reducing friction and preventing the patient from sliding down.

Its main advantage is its ability to easily transition, with affordable kits, from a standard medical bed (90 cm width - 200 cm length) to a more specialized model (up to 120 cm width - 220 cm length) to fit different morphologies without purchasing a new medical bed.

PRESSURE CARE SYSTEMS

Presentation

SCAN ME
to view all
devices

NAUSICAA Medical provides a complete range of Pressure Care Systems (pumps and air mattresses) which focuses on anti-decubitus prevention and care.

Each product is specially conceived to respond precisely to the patient's pathology depending on the ulcer stage and the risk level (user guide page 76).

Our product line aims to provide a bedding suitable for bedridden people, complies to all sizes of beds and adapts to the patient's condition, morphology, weight and number of hours spent in bed.

Prevention

The first prevention of pressure ulcers is to change the bearing points of the body on average every 3 hours to limit the prolonged compression of the blood vessels in relation to the bony prominences and to allow tissue irrigation.

Functioning

Alternating Mode: the system performs a regular and alternating discharge of each body area in contact with the support.

Static Mode and Low Pressure: the patient immersion in the support increases the contact surface and thus reduces the pressure on the body in order to maintain it below critical levels.

OVERVIEW

PRESSURE CARE SYSTEMS

USER GUIDE PART 1

It is important to check at first pressure ulcers stages and then the Norton scale to fully evaluate the patient then follow the user guide scheme to select the right system.

Step 1:
Determine the pressure ulcer stage

STAGE 1
Erythema not whitening on pressure, without any skin breakage. Discoloration of the skin, heat, oedema, and more or less induration can also be indicators, especially with dark skinned patients.

STAGE 2
Skin loss of partial thickness on the epidermis or dermis, which may be in the form of blisters, abrasions or superficial lesions.

STAGE 3
Loss of skin of full thickness on the subcutaneous layer, without penetration of the fascia (membrane protecting the muscle). The ulcer is in the form of a deep lesion and may or may not affect the underlying tissues.

STAGE 4
Complete skin loss with extension of the ulcer to the muscles, or even to the bones.

STAGE 1

STAGE 2

STAGE 3

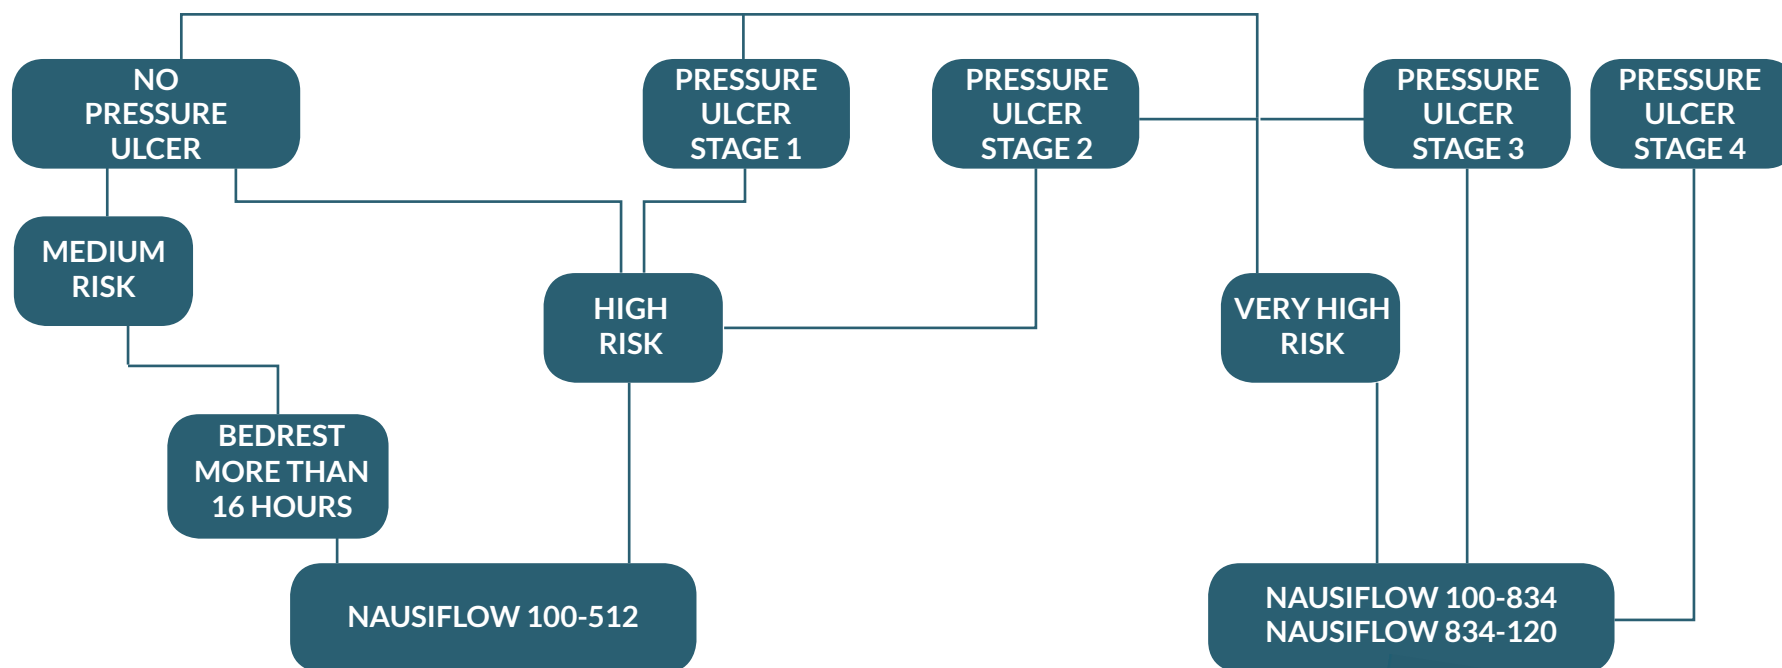

STAGE 4

Step 2: Assess the risk of pressure ulcer with the Norton Scale

NORTON SCALE

PHYSICAL CONDITION	GOOD	4
	FAIR	3

KEY FEATURES

Management of air mattresses height: 13 or 20 cm

Bariatric program for patients above 150 kg

NAUSIFLOW 100 MAXI System

WARRANTY

3 YEARS

Decubitus Level

NAUSIFLOW 100 MAXI Pump

It manages bariatric patients up to 300 kg, operates in alternating/static modes, is designed for the care of stage 4 pressure ulcers and is used for prevention on very high-risk levels.

Its high-speed pump can manage a wide range of air mattresses (up to 20 cm air height/140 cm in width) and it features a static operating mode to ensure treatment in palliative care.

NAUSIFLOW 834-120 Air Mattress

It is adapted to the single sleeping width of 120 cm (20 x 120 x 200 cm - 20 cm full air height) for bariatric patients up to 300 kg.

It is equipped with 8-shaped cells which favours patient immersion by reducing contact pressure.

KEY FEATURES

Independent cells in polyurethane on nylon frame

Transport mode

CPR

SIDE RAIL PADS

The Side Rail Pads are installed on the bed barriers as a prevention for the patient from moving its limbs through the bed rails and from direct contact with the frame.

The quick and easy fixation to the bed barriers is made thanks to adjustable buckles (25 mm).

The removable foam cover is manufactured in a flame-retardant fabric (classified CRIB 5).

SLIDE SHEETS

SLIDE SHEETS WITH HANDLES

For the handling of a patient, the Slide Sheet is a device which facilitates lateral and vertical translation as well as the raising of a lying patient in a bed. The sliding effect facilitates the work of caregivers by reducing friction due to the patient's body weight during handling. It is composed of synthetic fabric polyester tube in polyurethane induction, the 2 layers of fabric in contact slide on one another. It is absolutely not intended to carry a patient during a transfer hence the reason it does not have a maximum weight capacity. A model with handles is also available to simplify the use for the caregiver.

SLIDING GLOVES

PELVIC SUPPORT BELT

Manufactured in the same fabric as the slide sheets, sliding gloves allow to easily reposition a patient in a bed.

They must be placed on the caregiver hands to be effective.

It is designed to prevent patients from falling, to compensate slackening of abdominal muscles and to position in bed as it provides a secure positioning through a strengthened pelvic comfort.

Its main goal is to provide a stable position and we recommend to use it in a bed.

FASTENERS

HEEL PADS

Padded Wrist Fasteners

Security Wrist Fasteners

Ankle Fasteners

Large Model

Small Model

PADDED WRIST FASTENERS
Wrist Fasteners are installed around the wrists in order to prevent bruises and injuries due to removal attempts.

SECURITY WRIST FASTENERS
A security version of the wrist fasteners is available for a stronger contention for agitated patients.

ANKLE FASTENERS
Ankle Fasteners maintain the patient's ankles while allowing freedom of movement.

PATIENT POSITIONING

Presentation

Our Patient Positioning range, through its different belts available, is aiming to provide a comfortable and secure posture of patients while preventing falls and is washable at 70°C.

In complement, some additional devices participate in the search for a good posture of patient's limbs as their design makes it easy for everyday use and the choice of their fabrics makes it comfortable while being safe.

CE Certification

All our products are CE certified in compliance with EU requirements arising to the product's manufacturer.

REACH Compliance

Our products follow the REACH regulation which aims to progressively remove the most dangerous chemical substances in the European Union.

ECO YZA BELT

ECO SUPPORT BELT

We recommend using it when the patient needs to have the back pressed against the chair back and the buttocks at the bottom of the seat.

Pelvic element is recommended if the patient's pelvis slides forward.

It is designed to provide the patient with a simple and effective chair support.
Its modularity with the addition of a modular pelvic element participates in the search for a personalized and optimized posture for patients confined to a chair.

It is designed to prevent patients from falling.
Simple and efficient, it is designed for different uses in a chair.

	Pelvic Element	CECO-MP-PF

REFERENCE	CCMED2HP-PF
-----------	-------------

SIMPLE SLIM BELT

We recommend using it when the patient needs to have the back pressed against the chair back and the buttocks at the bottom of the seat.

It is designed to prevent patients from falling as it is a support on the chair combined with a comfort belt.

This simple and robust system is common to all Slim belts.

	75-95 cm	CCS2HP-PF-95
	90-110 cm	CCS2HP-PF-110
	110-130 cm	CCS2HP-PF-130

LARGE ABDOMINAL BELT

It is designed to prevent patients from falling and to compensate slackening of abdominal muscles.

Its large area of contact with the patient prevents abdominal constriction.

REFERENCES	Size S	CCA2HP-PF-S
	Size M	CCA2HP-PF-M
	Size L	CCA2HP-PF-L
	Size XL	CCA2HP-PF-XL

SIMPLE BIRDY BELT

We recommend using it if the patient's pelvis slides forward.

It is designed to prevent forward sliding of the patient and it can be installed while the patient is sitting to avoid any pelvic constriction.

INTEGRAL JACKET

We recommend using it if the patient's bust goes forward.

YZA JACKET

1. BUST YZA JACKET

2. INTEGRAL YZA JACKET with a pelvic element is recommended if the patient's body has no holding on the armchair.

It is designed to prevent cervical kyphosis by maintaining the bust in an upright position and its installation is facilitated due to its removable shoulders.

It is made in a waterproof and breathable fabric for an improved comfort.

The YZA Jacket is designed to provide the patient a customized chair support and is declined in 2 modular versions:

- 1. the Bust YZA Jacket
- 2. the Integral YZA Jacket is composed of the Bust YZA Jacket to which is added a pelvic modular element

HOLST ARM SLING

ARM SLINGS

ARM SLING

ARM SLING WITH DORSAL STRAP

It is designed to prevent or to completely reduce the glenohumeral sub-luxation (source of pains) while allowing a daily setting up by the patients themselves, without changing the initial adjustment.

The elasticated strap exerts a vertical traction on the humerus by applying the force of the traction to the elbow and to the homolateral shoulder.

REFERENCES	Left Side	EC-HSTG-PF
	Right Side	EC-HSTD-PF

Available in 2 models (with or without a dorsal strap), they are used in case of fracture, tendonitis or sprain to promote healing of the upper limb or shoulder.

The addition of a dorsal strap keeps the sling against the user's body (dorsal strap model only).

REFERENCES	ARM SLING		ARM SLING WITH DORSAL STRAP	
	Size 1	ECB-01-PF	ECBSM1-PF	
	Size 2	ECB-02-PF	ECBSM2-PF	
	Size 3	ECB-03-PF	ECBSM3-PF	

They prevent the restless patient from tearing his care devices as well as his incontinence protections.

The breathable net part on the top increases comfort and the integrated aluminum stiffener prevents the hand flexion.

It is designed to uphold the foot on the wheelchair footrest due to its Velcro strap fixation under and on the side of the footrest.
